WSP in USA Preparation

Manifesting New York 2025

Christopher Wang

Table of Contents

Cover Letter	v
1 Personal Background and Goals	1
1.1 The Pitch (Tell us about yourself)	1
1.2 Context	1
1.3 Skills and One Offs	2
2 STAR Framework:	6
3 General Questions.....	7
3.1 Can you walk us through your background and experience in sustainability, energy, and climate change?	7
3.2 What attracted you to this role at WSP, and why do you want to join our team?	7
3.3 What sustainability frameworks or protocols are you most familiar with, and how have you applied them in previous roles?	8
3.4 How do you stay updated on the latest trends and developments in sustainability and climate change?	8
3.5 What does sustainability mean to you, and how do you approach integrating it into business practices?	9
4 Technical Skills and Expertise	10
4.1 Describe your experience conducting greenhouse gas (GHG) inventories. What tools or methodologies have you used?	10
4.2 Have you ever conducted life cycle assessments (LCA)? If so, can you share a specific project where you applied LCA methodologies?	10
4.3 What is your experience with energy efficiency measures or renewable energy procurement?	13

4.4	How have you used data analysis tools like Excel, Power BI, or Access in your previous work?	14
4.5	What strategies have you developed for achieving energy or resource reductions?	18
4.6	Have you designed or implemented sustainability or climate risk performance targets? What were the results?	19
4.7	Can you explain how you would verify sustainability data for accuracy and compliance?	19
5	Project and Client Management	24
5.1	Share a time when you managed a complex sustainability project. What was the scope, and how did you ensure its success?	24
5.2	How do you balance competing priorities while managing multiple client projects?	26
5.3	Describe your approach to working with cross-functional teams across different geographies.	28
5.4	How do you communicate complex sustainability concepts to clients or stakeholders who may not have technical expertise?	28
5.5	Have you ever encountered a difficult client or stakeholder in a sustainability project? How did you handle it?	29
6	Behavioural and Situational Questions	31
6.1	Describe a challenging situation in your professional career and how you overcame it.	31
6.2	Give an example of a time you had to collaborate with a team to achieve a sustainability goal.	31
6.3	Tell us about a time you identified a gap in sustainability practices and implemented a solution.	32
6.4	How do you handle tight deadlines and high-pressure situations?	32
7	Knowledge of Frameworks and Regulations	34
7.1	How familiar are you with sustainability frameworks like CDP, GRI, TCFD, and the GHG Protocol?	34
7.2	Have you worked on projects related to supply chain sustainability or circularity? If so, describe your role.	34
7.3	What do you know about WSP's sustainability initiatives, and how do you see yourself contributing to them?	34

8	Communication and Reporting	36
8.1	What experience do you have with producing sustainability reports or disclosures?	36
8.2	Share an example of a presentation you delivered on a sustainability-related topic. How did you engage your audience?	37
8.3	How do you ensure the accuracy and clarity of written reports or presentations for stakeholders?	38
9	Leadership and Innovation.....	40
9.1	Have you ever led a sustainability initiative? What was the outcome?	40
9.2	How do you encourage innovation and creative solutions within a team setting?	40
9.3	If hired, what new ideas or approaches would you bring to this role?	41
10	Company-Specific Questions.....	42
10.1	What do you think are the biggest sustainability challenges WSP faces, and how would you address them?	42
10.2	Why do you think WSP should hire you over other candidates for this position?	42
10.3	If given the role, what would your 30-60-90-day plan look like? ...	43
11	Questions for the Interviewer	45
11.1	What are WSP's current priorities in the Sustainability, Energy, and Climate Change team?	45
11.2	Can you tell me about a recent project the team has worked on and its impact?	45
11.3	What does success look like in this role after one year?	45
11.4	How does WSP support professional development and growth in this role?	45
11.5	What opportunities exist for innovation and leadership within the team?	45

Cover Letter

November 27, 2024

Eric Christensen – Senior Vice President, Climate Change – WSP USA Inc
4840 Pearl East Circle Boulder 80301 CO United States

Re: Project Consultant, Sustainability, Energy and Climate Change – WSP USA

Dear Eric,

I am writing to express my interest in joining the Sustainability, Energy, and Climate Change team at WSP USA. I am passionate about creating large-scale, sustainable impact and am excited about the opportunity to expand my influence by joining WSP's efforts in the United States.

As a consultant in the Sustainability and Climate Change Advisory team at WSP in Australia, I have developed high-quality sustainability reports and strategies, managed large datasets, and provided sustainability assurance services. Notably, I prepared Ausgrid's GRESB Infrastructure Assessment, resulting in a year-on-year 35% improvement in 2023. I have conducted multiple life cycle and carbon assessments for high-rise developments and transport infrastructure, calculating potential emission reductions and influencing procurement decisions.

I have experience with the GHG Protocol, having delivered GHG emissions baselines for Bridgestone Mining Solutions Australia and WaterNSW. I co-developed Emissions Accounting Guidelines for NSW State government entities, which involved reviewing local and international policies, standards, and frameworks (including GHG Protocol and IFRS S2) and engaging with stakeholders to deliver a practical approach. I am confident that my skills in sustainability reporting, data analysis, and stakeholder engagement will enable me to excel in the SECC team at WSP USA.

In addition to my technical skills, I have taken the initiative to enhance team dynamics and efficiency showing my dedication to supporting my team. As the social lead, I organize team-building activities and foster a collaborative work environment. Separately, I manage the team's national wellbeing survey, reporting results to leadership to inform insights into attitudes and management strategies. I have also independently developed Python scripts to automate material linking and data downloads for our life cycle assessments, significantly improving our workflow and data accuracy.

I understand that additional climate disclosure requirements are coming into play next year via the California bill and CSRD. Hence, I believe now is the time for me to join WSP USA and support clients through this next wave of corporate sustainability. The larger scale of WSP's clients in the USA and their environmental footprint are almost incomparable to Australia due to the differences in population and economy. Hence, I believe transferring to the USA team will offer me the opportunity to increase my individual impact through my work improving portfolios and operational policies.

I am eager to leverage my skills in sustainability reporting, data analysis, and stakeholder engagement to continue contributing to WSP's sustainability goals from the USA. I look forward to discussing how my background, skills, and experiences align with the future of SECC and how I can contribute to your sustainability team.

Sincerely,

Christopher Wang

1 Personal Background and Goals

1.1 THE PITCH (TELL US ABOUT YOURSELF)

Hi Laurie, I'm Chris Wang, currently a Design Consultant in the Sustainability and Climate Change Advisory team at WSP Australia.

But learnt I was quite good at math

Fascinated with design and the built environment for years

And I wanted a degree where I could pursue both.

At the same time growing up, I felt there was never a point in which I didn't have some form of climate anxiety

This climate anxiety underscored a lot of my time while I was deciding a degree and luckily enough it turns out the built environment had the most opportunity from improvement

Hence, with an aptitude for both STEM and the Arts and a passion to improve the built environment i did a double major in Engineering and Architecture where I got to study the nexus of problem solving and designing for the lived experiences of people.

I'm passionate about improving the built environment from the bottom up to drive as much change as I can and be part of the greater movement towards net zero for society and to reduce our harm on the natural environment.

My first professional role was working as an assistant project officer for the department of defence, where I was part of a 4 person team managing the development of 3billion aud worth of capital facility and infrastructure upgrades for two years.

Coming up to 3 years now, I've been a sustainability consultant at WSP working with fund managers, developers, utilities and retail to drive innovative sustainable design solutions, setting sustainability targets for portfolios and precincts, and improving asset management year on year. My technical background sits in developing GHG emission baselines, conducting life cycle assessments for high-

rise developments, providing assurance services for GHG, energy, water, and waste data, as well as working through GRESB and Building Performance Sustainability assessments.

Discussion on the sheer differences in Australian and American economies - I've always known if I really wanted to make my impact on sustainability, It will be in America.

the size of companies in America and their environmental footprint in incomparable to Australia.

With the SEC Climate Disclosure Rule, the EU Corporate Sustainability Reporting Directive and the California bill all rearing their heads next year.

With disclosure comes scrutiny, and I know now more than ever clients would be trying to dig in and resolve their net zero targets and strategies.

I imagine a lot of sustainability strategy will come alive in the coming future, and I'm all about making a real impact to the lived experiences of people. So with that fact, right now makes the most sense for me to come over and put my hand in the ring to be part of that journey for our clients in the USA.

1.2 CONTEXT

With disclosure comes scrutiny, and I know now more than ever clients would be trying to dig in and resolve their net zero targets and strategies.

I imagine a lot of sustainability strategy will come alive in the coming future, and I'm all about making a real impact to the lived experiences of people. So with that fact, right now makes the most sense for me to come over and put my hand in the ring to be part of that journey for our clients in the USA.

- California Bill
 - o Disclosing scope 1 and 2 from 2026 with limited assurance, scope 3 in 2027
 - o Business with annual revenues over \$1billion

- scope 3 required in year 2
- SEC Landmark Climate Disclosure Rule
 - Overview: The (Securities and Exchange Commission)SEC's final rule mandates climate-related disclosures in annual reports and registration statements, starting with large accelerated filers (700million) for the year ending December 31, 2025.
 - Companies must disclose Scope 1 and Scope 2 GHG emissions, governance of climate risks, and the impact of climate risks on strategy and business model.
- **EU Corporate Sustainability Reporting Directive CSRD**
 - Starting next year for all large (250 employees, 25m euro balance sheet, 50m euro turnover) to report on next year's activities

1.3 SKILLS AND ONE OFFS

- Ran a workshop with the UN Global Compact Academy Series with Beijing
- Lead Life Cycle Assessments, Upfront Carbon Assessments for new high rise developments
- Manage 1-2 consultants per project
- Teaching others and guiding consultants through the standards and methodologies in line with our Australian green building rating schemes
- Creating custom emission analysis pieces to understand amounts of carbon neutral concrete to procure
- Leading a lot of data innovations at work
- Created a script to automate graph generation (top 5 materials, construction categories, operational end users)
- Currently working through creating a python script with Jupyter notebooks to do bill of quantity linking as a first pass, to save hours of work per analysis
- Currently developing GHG measurement guidelines for my state's government to apply to all government departments and entities
- Involved a review of state and federal policies, frameworks and standards to understand the various competing requirements for GHG reporting
- Green star performance - helping property clients complete sustainability audits on their portfolio at large for annual sustainability ratings
- Developing year on year improvements in their operation, across water, energy, cleaning, waste management and other policies
- Developing GHG emission baselines and inventories
- Water NSW scope 1, 2 and 3
- Used US Environmentally extended input output factors to determine emissions based on spend based data
- Created a long list of interventions
- Created a very detailed intervention mapping tool on excel
- Ran the client through workshops on emissions, and also blue sky thinking as well as rating our long lists based on criteria
- impact
- cost effectiveness
- ability to influence
- readiness
- enviro, legal, community risks
- co-benefits to enviro or community
- Bridgestone Mining - Helped a client with very little understanding of emissions create their first baseline as they need to feed into their Japanese Parents's targets
- Teaching our consultants about scope 1, 2 and 3
- Now creating a Decarbonisation plan

- Currently working through their data to understand where emissions lie throughout the year, what trends could be seen
- Creating a long list and working through them with the client
- Writing proposals to win work for LCA services
- Carrying out limited assurance services for GHG, energy, water and waste data
- Property Clients
- Delivering GRESB Infrastructure assessments and Green Star Performance ratings
- Helped a client jump from a 71 rating to a 97 the following year
- Same client has now dropped down to a 95 but would have sat at a 99 had they been able to get energy targets set this year
- Paired with improvement strategies for year on year improvement
- reviewing changes to gresb each year
- developed scoring tool
- Explaining how gresb scoring and reporting requirements look like to executive levels

1.4 TELL ME ABOUT YOURSELF.

I'm Chris Wang, currently a Design Consultant in the Sustainability and Climate Change Advisory team at WSP Australia. My passion lies at the intersection of STEM, design, and sustainability. Growing up with climate anxiety shaped my drive to pursue a double major in Engineering and Architecture, where I focused on solving problems and designing for lived experiences.

Professionally, I've worked with fund managers, developers, utilities, and retailers to deliver innovative solutions in sustainability. My expertise spans developing GHG emission baselines, conducting life cycle assessments, providing assurance services, and improving sustainability metrics like GRESB performance.

I'm particularly excited about the evolving regulatory landscape in the U.S., such as the SEC Climate Disclosure Rule, the California Bill, and the EU CSRD. These frameworks present unique opportunities to help businesses navigate disclosure requirements and achieve meaningful progress toward net-zero goals.

1.5 WHY ARE YOU INTERESTED IN THIS ROLE AT WSP USA?

I've been part of WSP's sustainability team in Australia, so I deeply understand the company's mission and values. Transitioning to WSP USA excites me because of the broader scope of clients, larger-scale projects, and the regulatory shifts coming into play, such as the SEC Climate Disclosure Rule and California Bill. I want to leverage my expertise in sustainability reporting, GHG assessments, and stakeholder engagement to drive meaningful impact at a global level.

Response:

The scale of sustainability challenges and opportunities in the U.S. is unparalleled. With disclosure requirements like the SEC Climate Disclosure Rule, the California Bill, and the EU CSRD coming into effect, there's a critical need for businesses to set and achieve impactful sustainability strategies.

Having worked in Australia's sustainability sector, I've realised that making a global impact requires stepping into markets where the environmental footprint and influence are significantly larger. The U.S. economy offers that scale, and I'm eager to contribute to the transformative changes that will define this next chapter in corporate sustainability.

1.6 WHERE DO YOU SEE YOURSELF IN FIVE YEARS?

In five years, I see myself as a trusted advisor in the sustainability sector, working on transformative projects that drive large-scale emissions reductions and operational efficiencies. I aim to be a leader at WSP, contributing to thought

leadership in climate strategy and helping shape the company's impact on global sustainability efforts.

1.7 WHAT DO YOU KNOW ABOUT THE COMPANY?

WSP is a global leader in engineering and professional services, with a strong commitment to driving sustainability and resilience across diverse sectors. The company is renowned for its expertise in infrastructure, environmental consulting, energy, and urban planning. WSP's emphasis on innovation, collaboration, and client-centric solutions aligns perfectly with my own values.

In particular, I admire WSP's active role in addressing global challenges like climate change, resource efficiency, and net-zero transitions. Initiatives such as their Future Ready program demonstrate a forward-thinking approach, integrating sustainability into projects while preparing for long-term trends like urbanisation and decarbonisation.

As a company deeply involved in providing strategic sustainability advice to its clients, WSP's commitment to shaping a greener and more sustainable future resonates strongly with my professional ambitions.

1.8 WHAT IS YOUR WORK STYLE?

My work style is collaborative, adaptable, and goal-oriented. I thrive in environments where teamwork and innovation are encouraged, and I always prioritise clear communication and mutual support to achieve shared objectives.

I like to approach tasks systematically:

1. I break down complex projects into manageable components.
2. I use data-driven analysis to inform decision-making.
3. I stay organised with tools like project timelines and task management systems to ensure deadlines are met.

I also value flexibility. Sustainability projects often involve unforeseen challenges, and I'm comfortable pivoting to address new priorities while maintaining focus on long-term goals.

Lastly, I balance independence with collaboration—taking ownership of tasks while actively seeking input from colleagues to ensure the best outcomes.

1.9 WHAT IS YOUR COMMUNICATION STYLE?

My communication style is clear, concise, and audience-focused. I believe effective communication starts with understanding the needs and knowledge level of my audience, whether that's technical experts, clients, or non-technical stakeholders.

For example, when working with clients on sustainability assessments, I translate technical findings into actionable insights, often using visuals like charts or infographics to make data more accessible.

- Visualisation of top impact materials to identify areas of focus
- Visualisation of decarbonisation in waterfall charts to show expected benefits

In team settings, I encourage open dialogue and collaboration by actively listening to different perspectives and ensuring everyone feels heard. I also prioritise regular updates and progress reports to keep stakeholders informed and aligned throughout the project lifecycle.

For short sprint projects like sustainability rating submissions where active engagement from the client is needed I like to host weekly meetings with the clients at the start of the week to allow for growth.

Overall, I aim to communicate in a way that builds trust, drives engagement, and ensures everyone is on the same page.

1.10 WHAT EXPERIENCE DO YOU HAVE RELATED TO THIS ROLE?

My experience aligns closely with the requirements of this role:

- At WSP Australia, I've worked as a Sustainability Consultant, partnering with fund managers, developers, and utilities to drive innovative sustainable design solutions.

- I've developed GHG baselines, conducted life cycle assessments for high-rise developments, and provided assurance services for energy, water, and waste data, all of which are directly applicable to this position.
- My work also includes improving asset performance year-on-year, helping clients set and achieve ambitious sustainability targets aligned with global frameworks like GRESB and the GHG Protocol.

Prior to this, I worked at the Department of Defence, where I managed \$3 billion worth of capital infrastructure upgrades, developing skills in project management, stakeholder engagement, and long-term strategic planning.

These roles have given me a strong foundation in sustainability strategy, technical analysis, and client engagement, making me well-suited to contribute to WSP's mission of driving sustainable development at scale.

2 STAR Framework:

- **Situation:** Set the context.
- **Task:** Describe your responsibility.
- **Action:** Explain the steps you took.
- **Result:** Highlight the outcomes.

General Guidance for STAR Responses

1. **Be Concise:** Aim for responses that are 1-2 minutes long. Focus on the most relevant details.
2. **Quantify Results:** Use numbers or percentages to highlight impact wherever possible.
3. **Align with the Role:** Always tie your actions and results back to the skills and responsibilities outlined in the job description.
4. **Show Growth:** Mention what you learned or how the experience has shaped your professional approach.

3 General Questions

3.1 CAN YOU WALK US THROUGH YOUR BACKGROUND AND EXPERIENCE IN SUSTAINABILITY, ENERGY, AND CLIMATE CHANGE?

I began my career as an Assistant Project Officer for the Department of Defence, where I managed \$3 billion in infrastructure upgrades. Currently, as a Sustainability Consultant at WSP Australia, I work with fund managers, developers, utilities, and retail clients to drive sustainable design solutions. My expertise includes GHG emissions baselines, life cycle assessments, assurance services, and improving sustainability metrics like GRESB performance

Situation: My career journey began with a role at the Department of Defence in Australia.

Task: I managed infrastructure projects worth \$3 billion and developed an interest in incorporating sustainable practices into large-scale projects.

Action: Transitioning to WSP, I specialised in sustainability consulting, focusing on GHG accounting, LCAs, and sustainability assessments such as GRESB.

Result: Over the past three years, I've helped clients reduce emissions, improve sustainability scores, and align their practices with global frameworks like TCFD and the GHG Protocol.

- **Why It's Critical:** This question is often one of the first asked, and it sets the tone for the interview. A strong, concise yet detailed answer establishes credibility.

Expanded Response Structure:

- **Start:** Highlight your educational foundation (engineering and architecture) and how it aligns with sustainability.
- **Middle:** Detail your career trajectory:

- Your role at the Department of Defence, managing \$3 billion in infrastructure upgrades.
- Your WSP experience—examples like developing GHG baselines and leading LCAs for high-rise projects.
- Emphasise specific accomplishments, e.g., helping clients improve year-on-year asset performance.
- **End:** Tie your experience to this role: how your technical and strategic expertise positions you to excel in the U.S. market and contribute to WSP's mission.

3.2 WHAT ATTRACTED YOU TO THIS ROLE AT WSP, AND WHY DO YOU WANT TO JOIN OUR TEAM?

Having worked at WSP Australia, I deeply align with WSP's vision of sustainability leadership. The U.S. market presents unique challenges with regulations like the SEC Climate Disclosure Rule, and I want to leverage my skills to drive impactful solutions at a larger scale.

Situation: I currently work with WSP Australia, where I've witnessed the company's commitment to sustainability.

Task: I want to scale my impact by tackling larger challenges in the U.S. market, where regulatory frameworks like the SEC Disclosure Rule are creating new opportunities.

Action: I aim to contribute to WSP's Future Ready program by applying my expertise in sustainability reporting, data analysis, and strategy development.

Result: Joining WSP in the U.S. aligns with my ambition to drive meaningful change on a global scale.

3.3 WHAT SUSTAINABILITY FRAMEWORKS OR PROTOCOLS ARE YOU MOST FAMILIAR WITH, AND HOW HAVE YOU APPLIED THEM IN PREVIOUS ROLES?

I am well-versed in the GHG Protocol, TCFD, GRESB, and ISO 14064. For example, I used the GHG Protocol to establish baselines for Bridgestone Mining Solutions and conducted GRESB assessments to improve Ausgrid's sustainability score by 35% year-on-year.

Situation: I've worked with frameworks like the GHG Protocol, TCFD, GRESB, and ISO 14064.

Task: A client needed a GHG emissions baseline to track progress toward their Net Zero goal.

Action: I used the GHG Protocol to calculate Scope 1, 2, and 3 emissions.

Result: this work led to the client engaging us further to develop their carbon roadmap in which I used their emission profile to determine hotspots and develop long lists for interventions which we then whittled down.

Another situation, involved a leader property real estate investment trust looking to develop a portfolio wide water strategy. I used water related principles from TCFD to help develop initiatives similarly after evaluating water consumption related data.

- Water related risks such as drought and flooding and how assets would be impacted by water scarcity or excess in a drying climate to address long term asset viability.
- TNFD recognises sectors dependency on ecosystem services, particularly water supply, water purification and water flow regulation.
- Understanding TNFD guidance for real estate to understand real estate core metrics for water – withdrawal, area, sources.

This allowed us to create a comprehensive water strategy which allowed the client to use as leverage to rally funding and resources for water related attributes.

I also applied GRESB to benchmark their sustainability performance.

Result: The client improved their GRESB score by 35% year-on-year and achieved a 20% reduction in emissions over two years.

3.4 HOW DO YOU STAY UPDATED ON THE LATEST TRENDS AND DEVELOPMENTS IN SUSTAINABILITY AND CLIMATE CHANGE?

I regularly attend industry conferences and webinars through GBCA, MECLA, Engineers Australia, and others. I also like to follow or connect with industry leaders across consulting and client side sustainability professionals both in Australia, the UK and USA which is how I follow along regulatory developments such as the SEC Climate Disclosure Rule.

Situation: Sustainability is a rapidly evolving field with frequent regulatory updates and technological advancements.

Task: It's essential to stay informed to provide clients with cutting-edge solutions.

Action: I regularly attend industry conferences, subscribe to publications like *GreenBiz* and *Environmental Leader*, and participate in professional networks such as the Green Building Council.

Result: Staying updated has enabled me to anticipate trends like Scope 3 reporting requirements and advise clients proactively.

- **Why It's Critical:** Staying current is crucial in a fast-evolving field like sustainability, particularly with the regulatory shifts in the U.S. market.

Expanded Response:

- Highlight your proactive approach: subscribing to industry reports, engaging in professional networks, and attending conferences.
- Mention specific resources like updates from the IPCC, GRI, and industry leaders.

- Discuss your involvement in WSP initiatives, such as knowledge-sharing sessions or white papers.
- Add a forward-looking aspect: your plans to stay ahead of upcoming regulations, such as the SEC Climate Disclosure Rule, through webinars, case studies, and collaboration with WSP's global teams

3.5 WHAT DOES SUSTAINABILITY MEAN TO YOU, AND HOW DO YOU APPROACH INTEGRATING IT INTO BUSINESS PRACTICES?

Sustainability means creating systems that minimise environmental harm while maximising societal co-benefits. I integrate it by setting clear, measurable targets for emissions reductions, resource efficiency, and stakeholder engagement, ensuring alignment with global frameworks like the GHG Protocol and TCFD

Situation: Growing up with climate anxiety, I developed a strong desire to minimise environmental harm through systemic changes.

Task: I view sustainability as the integration of environmental stewardship, social equity, and economic viability into decision-making.

Action: In my projects, I prioritise setting measurable targets, using frameworks like TCFD to align sustainability goals with business strategies, and promoting transparency in reporting.

Result: This approach has led to tangible results, such as improving resource efficiency and enhancing stakeholder trust.

One thing I love working in sustainability is learning how all the different pieces of the puzzle fit together. How design based rating tools, vs disclosure based ratings, along with mandatory vs voluntary, and regulatory requirements all fit in to each other. How rating schemes may be voluntary but the market dictates they be implemented for the sake of ESG investments. How at first I thought disclosure only tools didn't amount to much but it made me understand how they use transparency as a commercial driver and how it influences organisations to invest in developing data capture mechanisms for ESG areas they lag behind in.

One of the things I enjoy most about working in sustainability is understanding how the different frameworks, tools, and regulatory requirements fit together to drive change. Early in my career, I saw rating schemes as either mandatory or voluntary, but I've since come to appreciate the nuance behind them.

For example, I used to think disclosure-based tools like GRESB or CDP were mainly for reporting purposes without much impact. However, I've learned that transparency itself is a powerful commercial driver. These tools push organisations to develop better data capture mechanisms and invest in improving ESG areas where they lag, especially as investors increasingly demand accountability.

I also find it fascinating how design-based tools like Green Star or NABERS complement disclosure tools. While design tools optimise the performance of individual buildings, disclosure frameworks shape organisational strategy. Even voluntary tools become de facto requirements when the market expects them to meet ESG investment criteria. Seeing how all these pieces interact to drive sustainability outcomes keeps me passionate about this field.

4 Technical Skills and Expertise

4.1 DESCRIBE YOUR EXPERIENCE CONDUCTING GREENHOUSE GAS (GHG) INVENTORIES. WHAT TOOLS OR METHODOLOGIES HAVE YOU USED?

I've conducted GHG inventories for various clients using tools like Excel, eTool, and custom Python scripts.

- Used eTool calculation tool along with custom initiative pathway modelling tool made on excel.

My methodologies align with the GHG Protocol, ensuring accuracy and compliance with reporting standards

Situation: A utility client required a comprehensive GHG inventory to support their Net Zero target.

Task: My role was to calculate Scope 1, 2, and 3 emissions using the GHG Protocol.

Action: I collected activity data, utilised emission factors from government databases, and used Excel and Python for calculations.

Result: The GHG inventory provided a clear emissions baseline, enabling the client to identify reduction opportunities and secure buy-in for their decarbonisation strategy.

Alt: How have you addressed GHG reporting challenges in your current role?

Response:

- **Situation:** At WSP Australia, I led the development of GHG emissions baselines for WaterNSW. The challenge was reconciling diverse datasets across operational and financial domains.

-
- **Task:** My role was to deliver a comprehensive GHG baseline aligned with the GHG Protocol.
- **Action:** I created a standardised data framework, engaged with cross-functional teams to ensure data integrity, and provided future-year forecasting for both standard and drought-year profiles.
- **Result:** The project established a robust foundation for Bridgestone to set emissions reduction targets and align with industry best practices.

4.2 HAVE YOU EVER CONDUCTED LIFE CYCLE ASSESSMENTS (LCA)? IF SO, CAN YOU SHARE A SPECIFIC PROJECT WHERE YOU APPLIED LCA METHODOLOGIES?

Yes, I conducted an LCA for a high-rise development in Sydney. Using eTool, excel spreadsheets, and custom made graphing tools and python scripts, I assessed upfront carbon, embodied carbon, operational energy, operational water, and end-of-life scenarios, providing actionable insights to reduce the project's carbon footprint by 30%

Yes, I've conducted several life cycle assessments (LCAs) for high-profile projects, particularly focusing on upfront carbon reductions. One example is a high-rise development in Sydney, where we aimed to achieve at least a 30% reduction in upfront carbon emissions and a 30% weighted reduction across whole-of-life environmental impacts, including ozone depletion, photochemical smog, and acidification potential.

The project demonstrated how LCAs are not just about compliance but are powerful tools for influencing design decisions early in the process. The adoption of upfront carbon assessments has been accelerating in Australia, particularly as developers and policymakers recognize that embodied carbon emissions need to be addressed to meet net zero targets. My work on this project

reflects this evolving landscape, showcasing my ability to apply technical methodologies while delivering **real-world sustainability outcomes**.

one of the most impactful projects I worked on involved conducting an LCA to reduce upfront and embodied carbon emissions using **eTool by Cerclos**, a leading life cycle design software that enables detailed environmental impact assessments for buildings and infrastructure.

Over the past year, the landscape in Australia has shifted towards upfront carbon assessments during the early design stages. This reflects a growing recognition that decisions made during design development have the most significant impact on reducing a building's carbon footprint. I've been at the forefront of this shift, helping clients quantify and address their embodied carbon as a first step toward meeting their net zero targets.

Situation:

At WSP, I conducted a detailed life cycle assessment for a major high-rise development in Sydney. The developer was aiming to meet ambitious sustainability targets, particularly in reducing **upfront carbon emissions** (emissions associated with materials and construction).

A major developer approached WSP with a request to **assess the carbon footprint of a high-rise building** in Sydney, with a particular focus on **upfront carbon emissions** in line with **emerging Australian regulations** and **ESG investment pressures**.

Task:

My primary task was to assess the environmental impact of the building's lifecycle — focusing on **embodied carbon** from materials, **operational energy and water use**, and **end-of-life scenarios**. I was also responsible for identifying hotspots and proposing actionable strategies to reduce emissions.

I was responsible for **performing a detailed LCA** to identify **hotspots in embodied and operational carbon**, as well as **whole-of-life environmental**

impacts, and to propose actionable measures to **reduce the project's carbon footprint**.

Action:

Using **eTool by Cerclos**, I conducted a comprehensive LCA covering the building's materials, energy use, and end-of-life scenarios. Specifically:

- I worked with concrete suppliers to develop custom reference case mixes with specific SCM rates, ensuring apples-to-apples comparisons between proposed mixes and our baseline.
- I identified major hotspots in steel and concrete, which accounted for a significant portion of embodied carbon. We explored various options, such as using low-carbon steel from Sweden vs. local steel procurement, balancing carbon savings with local economic benefits.
- I challenged the integrity of the rating tool defined reference case data by advocating for more stringent Australian BAU benchmarks, particularly around SCM use and reinforcement rates. This ensured clients weren't simply meeting "easy" targets but were genuinely pushing toward ambitious carbon reductions.
- I also created custom graphing tools and data download scripts to mass-download LCA data from eTool, significantly speeding up the team's workflow.

Using **eTool**, **custom Excel models**, and **Python scripts** that I developed, I conducted a comprehensive LCA. My process involved:

- **Material assessment:** Evaluating the carbon intensity of construction materials, including concrete, steel, and glazing.
- **Operational performance:** Modelling the building's energy use, water consumption, and potential emissions over its lifecycle.
- **Scenario analysis:** Exploring **alternative materials** and **end-of-life options** to determine the most sustainable pathways.

Additionally, I engaged with **developers, engineers, and architects** to present my findings and ensure that my recommendations aligned with both their **design priorities** and **budget constraints**. I provided **cost-benefit analyses** that demonstrated how low-carbon material substitutions could achieve significant carbon reductions without inflating costs.

5 Result:

The project achieved a **30% reduction in upfront carbon emissions**, with recommendations for **further reductions** through **procurement strategies**. Beyond the direct emissions savings, our work **shifted the client's approach to sustainability**, embedding **whole-of-life environmental impact considerations** into their **design development process**. As this was one of their first ever projects prioritising upfront carbon in this way.

Situation: A developer sought to minimise the carbon footprint of a high-rise project in Sydney.

Task: My task was to perform an LCA to identify hotspots in embodied and operational carbon.

Action: Using OpenLCA, I modelled the environmental impact of building materials, energy use, and end-of-life scenarios.

Result: Recommendations led to a 15% reduction in embodied carbon by substituting materials and optimising building systems.

5.1 CAN YOU SHARE AN EXAMPLE OF A TIME YOU INFLUENCED STAKEHOLDER DECISIONS THROUGH YOUR ANALYSIS?

One of the most significant examples of influencing stakeholder decisions through my analysis was during a high-rise LCA project in Sydney, where my work helped shape material procurement strategies to balance carbon reductions with commercial priorities.

6 STAR Breakdown:

Situation:

A developer engaged WSP to conduct a detailed LCA for a high-rise project in Sydney, seeking actionable insights to reduce upfront carbon emissions and meet ESG-driven expectations from investors.

Task:

I was tasked with identifying carbon hotspots and providing recommendations on low-carbon material procurement that would achieve meaningful reductions in the project's carbon footprint.

Action:

Through detailed LCA modelling using eTool, I:

- Worked closely with concrete suppliers to create custom reference case mixes with specific SCM rates, ensuring fair and accurate comparisons.
- Identified hotspots in concrete and steel. I explored various steel procurement options, comparing low-carbon steel from Sweden with locally produced steel, balancing the lower emissions of imported steel against the co-benefits of supporting local industries and improving supply chain resilience.
- Assessed whole-of-life environmental impacts beyond carbon, including ozone depletion, photochemical smog, and acidification potential, providing stakeholders with a comprehensive understanding of their environmental footprint.
- Developed custom graphing tools and Python scripts to automate the download of LCA data from eTool, streamlining the analysis process for future projects.

Result:

The client adopted several recommendations from my analysis, including:

- Switching to low-carbon concrete mixes.
- Revising steel procurement strategies to balance environmental and commercial considerations.

- Embedding whole-of-life sustainability goals into their future design processes.

My work not only reduced the project's upfront carbon footprint by 30% but also influenced the client's long-term sustainability strategy, demonstrating the value of robust LCA data in shaping procurement decisions.

Guidance: Highlight technical skills and their practical impact.

Response Example:

- **Situation:** At WSP, I conducted a carbon assessment for a major high-rise development project.
- **Task:** My task was to calculate potential emission reductions and propose sustainable procurement options.
- **Action:** I researched innovative building materials and practices, calculated their carbon footprints, and presented a cost-benefit analysis to developers, engineers, and architects.
- **Result:** My analysis led to the adoption of low-carbon materials, reducing the project's overall emissions while maintaining budget constraints.

6.1 WHAT IS YOUR EXPERIENCE WITH ENERGY EFFICIENCY MEASURES OR RENEWABLE ENERGY PROCUREMENT?

I've advised clients on energy efficiency strategies, including retrofitting HVAC systems and optimising building operations. For renewable energy procurement, I've helped clients navigate GreenPower (a Purchase Power Agreement) needs based on their emission and or upfront carbon profile along side on-site solar installations.

Situation: A retail client wanted to lower operational costs and reduce emissions.

Task: My role was to assess energy efficiency opportunities and explore renewable

energy procurement options.

Action: I identified HVAC upgrades, implemented lighting retrofits, and facilitated a Power Purchase Agreement for solar energy.

Result: These measures reduced energy costs by 10% and Scope 2 emissions by 20%.

Alt What strategies have you developed for achieving energy or resource reductions?

- **Why It's Critical:** Demonstrates technical expertise and ability to deliver real-world results.

Expanded Response in STAR Format:

- **Situation:** A client's office portfolio had inconsistent energy performance across sites.
- **Task:** Design a strategy to reduce energy consumption by 10% across all sites within two years.
- **Action:**
 - Conducted energy audits to identify low-hanging fruit and high-impact opportunities.
 - Recommended behavioural changes (e.g., optimised HVAC settings) and capital investments (e.g., LED retrofits, solar panels).
 - Introduced a dashboard to track site performance, ensuring transparency and accountability.
- **Result:** Achieved a 12% reduction in energy use within the first year, saving the client over \$500,000 in operational costs.

6.2 HOW HAVE YOU USED DATA ANALYSIS TOOLS LIKE EXCEL, POWER BI, OR ACCESS IN YOUR PREVIOUS WORK?

I frequently use Excel for emissions calculations and Power BI for visualising sustainability performance metrics.

Situation

In my role as a Design Consultant - Sustainability and Climate Change, I have worked on various projects that required extensive data analysis to drive informed decisions and recommendations. Two notable projects include the Charter Hall Water Resilience Assessment and a Life Cycle Assessment (LCA) for determining upfront carbon emissions.

Task

For the Charter Hall Water Resilience Assessment, the task was to evaluate water consumption across Charter Hall's portfolio, identify water-related risks, and propose actionable recommendations to enhance water resilience and efficiency. For the LCA project, the task was to analyze the bill of quantities, emission factors, and product Environmental Product Declarations (EPD) data to identify carbon hotspots and determine the required carbon reductions, green power, and offsets.

Action

1. Excel Usage:

• Charter Hall Water Resilience Assessment:

- I used Excel to analyze water consumption data and building attributes across Charter Hall's portfolio. This involved creating pivot tables, charts, and graphs to visualize water use patterns and trends.
- I conducted sector-specific analysis by separating water consumption data for office, retail shopping centers, and industrial sectors to identify sector-specific findings and trends.

- I identified data gaps and opportunities for improvement, such as the need for better data coverage, sub-metering, and understanding tenant water use.

• LCA Data Analysis:

- I used Excel to analyze the bill of quantities, emission factors, and product EPD data. This involved creating detailed spreadsheets to calculate upfront carbon emissions based on the analyzed data.
- I identified hotspots in upfront carbon emissions and determined the required carbon reductions and potential measures to achieve them.
- I calculated the amount of green power required and potential offsets needed to achieve carbon neutrality.

Result

1. Charter Hall Water Resilience Assessment:

- The analysis and recommendations provided actionable insights for improving water management practices, such as leak detection, water-efficient fixtures, rainwater harvesting, and cooling tower optimization.
- The project helped Charter Hall enhance its water resilience and efficiency, reducing operational costs and improving sustainability outcomes.

2. LCA Data Analysis:

- The detailed analysis identified carbon hotspots and provided a clear pathway for achieving carbon reductions, green power requirements, and offsets.
- The project contributed to more sustainable building practices and informed decision-making for reducing carbon emissions.

Dotpoint Summary

- **Situation:** Worked on Charter Hall Water Resilience Assessment and LCA projects.
- **Task:** Evaluate water consumption, identify risks, and analyze carbon emissions.
- **Action:**
 - **Excel Usage:** Analyzed water consumption data, created pivot tables, charts, and graphs, identified data gaps, and analyzed bill of quantities, emission factors, and EPD data.
 - **Power BI and Access:** Used for creating interactive dashboards and managing large datasets.
- **Result:**
 - Provided actionable recommendations for water management and carbon reduction.
 - Enhanced water resilience and efficiency for Charter Hall and informed sustainable building practices.

Situation

The **Charter Hall Water Resilience Assessment** aimed to evaluate water consumption across Charter Hall's diverse portfolio, identify water-related risks, and propose actionable recommendations to enhance water resilience and efficiency. The project involved analyzing water use patterns, trends, and key factors influencing consumption across different sectors such as office, retail shopping centers, and industrial assets.

Task

The primary tasks involved:

1. **Data Collection:** Gathering water consumption data and building attributes across Charter Hall's portfolio.
2. **Stakeholder Engagement:** Conducting workshops and presentations with key Charter Hall staff to gather insights and feedback.
3. **Risk Evaluation:** Assessing water-related risks to Charter Hall's assets and operations.
4. **Water Use Analysis:** Analyzing water consumption data to identify trends, data gaps, and opportunities for improvement.

Action

1. **Data Analysis:**
 - **Excel Usage:** Excel was used to analyze water consumption data, building attributes, and other relevant metrics. This included creating pivot tables, charts, and graphs to visualize water use patterns and trends.
 - **Sector-Specific Analysis:** Water consumption data was analyzed separately for office, retail shopping centers, and industrial sectors to identify sector-specific findings and trends.
 - **Data Gaps and Opportunities:** Identified gaps in water consumption data and opportunities for improvement, such as the need for better data coverage, sub-metering, and understanding tenant water use.
2. **Water Use Analysis:**
 - **Overall Portfolio Findings:** The industrial sector emerged as the primary driver of year-on-year changes in water consumption, accounting for 75% of lettable area and 70% of total known water use.
 - **Sector-Specific Findings:** Water consumption in offices was predominantly associated with amenities, leaks, and heat rejection, while water use in industrial assets was largely driven by tenant operations.

- **Data Gaps and Opportunities:** Identified gaps in water consumption data and opportunities for improvement, such as the need for better data coverage, sub-metering, and understanding tenant water use.
3. **LCA Data Analysis:**
- **Bill of Quantities:** Used Excel to analyze the bill of quantities, emission factors, and product Environmental Product Declarations (EPD) data.
 - **Hotspot Identification:** Identified hotspots in upfront carbon emissions based on the analyzed data.
 - **Carbon Reductions:** Determined the required carbon reductions and potential measures to achieve them.
 - **Green Power and Offsets:** Calculated the amount of green power required and potential offsets needed to achieve carbon neutrality.

Result

1. **Insights and Recommendations:**
- Provided actionable recommendations for improving water management practices, such as leak detection, water-efficient fixtures, rainwater harvesting, and cooling tower optimization.
 - Outlined a comprehensive water strategy, including setting objectives, types of targets, data coverage, resilience, and competitor analysis.
2. **Enhanced Water Resilience:**
- The analysis and recommendations helped Charter Hall enhance its water resilience and efficiency, reducing operational costs and improving sustainability outcomes.

Dotpoint Summary

- **Situation:** Evaluated water consumption across Charter Hall's portfolio to enhance water resilience.

- **Task:** Data collection, stakeholder engagement, risk evaluation, and water use analysis.
- **Action:**
 - **Data Analysis:** Used Excel for data analysis, sector-specific analysis, and identifying data gaps.
 - **Water Use Analysis:** Analyzed overall portfolio and sector-specific water consumption.
 - **LCA Data Analysis:** Analyzed bill of quantities, emission factors, and EPD data to identify carbon hotspots and required reductions.
- **Result:**
 - Provided actionable recommendations for water management.
 - Enhanced water resilience and efficiency for Charter Hall.

If you need further details or have any specific questions, feel free to ask!

\

1. Data Analysis

The data analysis for the Charter Hall Water Resilience Assessment involved a comprehensive examination of water consumption data and building attributes across Charter Hall's portfolio. This included analyzing water use patterns, trends, and key factors influencing consumption across different sectors such as office, retail shopping centers, and industrial assets. The analysis aimed to provide insights into overall portfolio performance and sector-specific findings.

2. Water Use Analysis

The water use analysis covered several key areas:

1. Overall Portfolio Findings:

- The industrial sector emerged as the primary driver of year-on-year changes in water consumption since FY19. This was largely attributed to substantial acquisitions by Charter Hall during this period. Industrial assets now account for 75% of lettable area and 70% of total known water use
- The office and retail shopping centers sectors showed stable water consumption volumes, but their share of total consumption declined over time as the number of industrial assets grew
- The office sector showed a decrease in water consumption since FY21, likely due to the continued uptake of work-from-home practices

Sector-Specific Findings:

- **Office Sector:** Water consumption in offices is predominantly associated with amenities, leaks, and heat rejection. The office sector showed a decrease in water intensity since 2020, which is thought to be related to lower occupancy rates resulting from hybrid working practices that emerged post-pandemic
- **Retail Shopping Centers:** Water consumption in retail shopping centers is also associated with amenities, leaks, and heat rejection. The total water volume consumed in shopping centers remained stable across the period
- **Industrial Sector:** Water use in industrial assets is largely driven by tenant operations, making it much more variable. Industrial assets currently make up more than 75% of total water consumption, growing four-fold over the last four years due to new acquisitions, including assets with water-intensive tenant operations

2. Data Gaps and Opportunities:

- The report identified gaps in water consumption data and opportunities for improvement. This included the need for

better data coverage, sub-metering, and understanding tenant water use

- Specific data gaps were noted for Long WALE retail and social infrastructure assets, where water consumption data is currently more limited

Other Data Analysis

The report also included other data analysis elements:

3. Stakeholder Engagement:

- The methodology included conducting workshops and presentations with key Charter Hall staff from various sectors. This helped gather insights and feedback on water management practices and challenges

4. Risk Evaluation:

- The assessment involved evaluating water-related risks to Charter Hall's assets and operations. This included understanding the impact of climate change on water resources and identifying assets at risk of water scarcity

5. Water Use Risks:

- The report discussed operational, financial, and reputational risks associated with water use. It highlighted lessons from the 2019/20 drought and the potential impact of climate change on water security

6. Actions and Recommendations:

- The report provided recommendations for improving water management practices. This included existing actions, considerations for further action, and specific water efficiency measures such as leak detection, water-efficient fixtures, rainwater harvesting, and cooling tower optimization

Water Use Strategy:

- The report outlined the elements of a comprehensive water strategy, including setting objectives, types of targets, data coverage, resilience, and competitor analysis. It emphasized the importance of establishing a water accounting boundary and setting SMART targets

Overall, the report employed a multi-faceted approach to analyze water consumption data, engage stakeholders, evaluate risks, and provide actionable recommendations for improving water resilience and efficiency across Charter Hall's portfolio

6.3 WHAT STRATEGIES HAVE YOU DEVELOPED FOR ACHIEVING ENERGY OR RESOURCE REDUCTIONS?

In my role as a Design Consultant - Sustainability and Climate Change, I have developed several effective strategies for achieving energy and resource reductions. Here are two examples from my previous work:

Water Strategy for Charter Hall

Situation: The Charter Hall Water Resilience Assessment aimed to evaluate water consumption across Charter Hall's diverse portfolio, identify water-related risks, and propose actionable recommendations to enhance water resilience and efficiency.

Task: The task was to analyze water consumption data, identify trends, data gaps, and opportunities for improvement, and develop strategies to reduce water usage and enhance resilience.

Action:

1. **Data Analysis:** I used Excel to analyze water consumption data and building attributes across Charter Hall's portfolio. This involved creating pivot tables, charts, and graphs to visualize water use patterns and trends.

2. **Sector-Specific Analysis:** Water consumption data was analyzed separately for office, retail shopping centers, and industrial sectors to identify sector-specific findings and trends.
3. **Identifying Data Gaps:** Identified gaps in water consumption data and opportunities for improvement, such as the need for better data coverage, sub-metering, and understanding tenant water use.
4. **Developing Strategies:**
 - **Leak Detection:** Implementing regular leak detection and repair programs to reduce water wastage.
 - **Water-Efficient Fixtures:** Installing water-efficient fixtures and appliances to reduce water consumption.
 - **Rainwater Harvesting:** Implementing rainwater harvesting systems to capture and reuse rainwater for non-potable purposes.
 - **Cooling Tower Optimization:** Optimizing cooling tower operations to reduce water usage in HVAC systems.

Result: The analysis and recommendations helped Charter Hall enhance its water resilience and efficiency, reducing operational costs and improving sustainability outcomes.

LCA Project for Carbon Emissions

Situation: The LCA project aimed to analyze the bill of quantities, emission factors, and product Environmental Product Declarations (EPD) data to identify carbon hotspots and determine the required carbon reductions, green power, and offsets.

Task: The task was to conduct a detailed LCA analysis using Excel to determine upfront carbon emissions, identify hotspots, and develop strategies for carbon reduction.

Action:

1. **Data Analysis:** Used Excel to analyze the bill of quantities, emission factors, and product EPD data. This involved creating detailed spreadsheets to calculate upfront carbon emissions based on the analyzed data.

2. **Hotspot Identification:** Identified hotspots in upfront carbon emissions and determined the required carbon reductions and potential measures to achieve them.
3. **Developing Strategies:**
 - **Material Substitution:** Recommending the use of low-carbon materials and products to reduce upfront carbon emissions.
 - **Energy Efficiency:** Implementing energy-efficient design and construction practices to reduce operational carbon emissions.
 - **Green Power:** Calculating the amount of green power required to offset carbon emissions and recommending the use of renewable energy sources.
 - **Carbon Offsets:** Identifying potential carbon offset projects to achieve carbon neutrality.

Result: The detailed analysis identified carbon hotspots and provided a clear pathway for achieving carbon reductions, green power requirements, and offsets. The project contributed to more sustainable building practices and informed decision-making for reducing carbon emissions.

Dotpoint Summary

- **Water Strategy for Charter Hall:**
 - **Data Analysis:** Used Excel to analyze water consumption data and identify trends.
 - **Strategies:** Leak detection, water-efficient fixtures, rainwater harvesting, and cooling tower optimization.
 - **Result:** Enhanced water resilience and efficiency, reducing operational costs and improving sustainability outcomes.
- **LCA Project for Carbon Emissions:**
 - **Data Analysis:** Used Excel to analyze bill of quantities, emission factors, and EPD data.
 - **Strategies:** Material substitution, energy efficiency, green power, and carbon offsets.

- **Result:** Identified carbon hotspots and provided a pathway for achieving carbon reductions, green power requirements, and offsets.

These examples demonstrate my ability to develop effective strategies for achieving energy and resource reductions through detailed data analysis and informed decision-making.

6.4 HAVE YOU DESIGNED OR IMPLEMENTED SUSTAINABILITY OR CLIMATE RISK PERFORMANCE TARGETS? WHAT WERE THE RESULTS?

Yes, I helped a retail client set Net Zero targets by 2030. By implementing GHG baselines and reduction strategies, they achieved a 25% emissions reduction within three years.

- Talk about GS Performance
- **Situation:** A client aimed to align their business strategy with TCFD recommendations.
Task: My role was to develop measurable targets for emissions reduction and climate risk mitigation.
Action: I conducted scenario analysis, set science-based targets, and proposed KPIs for monitoring progress.
Result: The targets increased stakeholder confidence and helped secure green financing.

6.5 CAN YOU EXPLAIN HOW YOU WOULD VERIFY SUSTAINABILITY DATA FOR ACCURACY AND COMPLIANCE?

I follow best practices such as ensuring data triangulation, using third-party verification, and aligning with frameworks like ISO 14064. For example, I audited GHG data for a fund manager to ensure compliance with the GHG Protocol.

Situation: A fund manager needed assurance for their GHG emissions data.

Task: My role was to verify the data against the GHG Protocol and ISO 14064 standards.

Action: I cross-referenced activity data, reviewed calculations, and conducted a third-party audit.

Result: The data was verified as accurate, ensuring compliance and credibility with stakeholders.

Verifying Sustainability Data for Accuracy and Compliance

In my role as a Design Consultant - Sustainability and Climate Change, I have conducted several data assurance projects, including the Growthpoint CY23 GRESB Data Assurance project. Here is how I approached verifying sustainability data for accuracy and compliance:

Situation

The Growthpoint CY23 GRESB Data Assurance project aimed to provide limited assurance over Growthpoint's environmental data, including energy, water, and greenhouse gas (GHG) emissions. The project involved evaluating the accuracy and completeness of the data reported for the Global Real Estate Sustainability Benchmark (GRESB) survey.

Task

The primary tasks involved:

1. **Data Collection:** Gathering environmental data, including energy consumption, water usage, and GHG emissions, across Growthpoint's portfolio.
2. **Stakeholder Engagement:** Conducting meetings and interviews with key Growthpoint staff to understand the data collection and reporting processes.
3. **Risk Evaluation:** Assessing the risks of material misstatement in the reported data.
4. **Data Verification:** Verifying the accuracy and completeness of the reported data through detailed testing and analysis.

Action

1. Data Analysis:

- **Excel Usage:** I used Excel to analyze environmental data, including energy consumption, water usage, and GHG emissions. This involved creating pivot tables, charts, and graphs to visualize data patterns and trends.
- **Work Papers:** I created several work papers to document the data analysis and verification process, including:
 - **CY23 - WP.01 - Environmental Data Process Notes.docx:** Documented the data collection and reporting process.
 - **CY23 - WP.02 - Analytics_Elec Gas Water.xlsx:** Conducted analytical reviews of energy and water data for material variances or unexpected movements.
 - **CY23 - WP.03 - Activity Data Testing_Elec, Gas, Water.xlsx:** Verified that energy and water consumption data were accurately recorded from invoices into facility-level inventories.
 - **CY23 - WP.04 - Site Completeness.xlsx:** Confirmed that all relevant facilities were included in the final inventory.
 - **CY23 - WP.05 - Energy Content and Emissions Factor Testing.xlsx:** Verified the appropriateness of energy content and emission factors used by Growthpoint.
 - **CY23 - WP.06 - Calculation Methodology Testing.xlsx:** Confirmed the accuracy of Growthpoint's calculation methodology.
 - **CY23 - WP.07 - Missing Data Estimate Check.xlsx:** Reviewed the reasonableness of Growthpoint's approach for estimating missing data.

- **CY23 - WP.o8 - Final Data Check.xlsx:** Checked that the data in the corporate inventory agreed with site inventories.

2. Stakeholder Engagement:

- Conducted meetings and interviews with key Growthpoint staff, including the Sustainability Advisor and data owners, to understand the data collection and reporting processes.
- Documented the understanding of the business and its environment in the **CY23 - Understand the Business.docx** file.

3. Risk Evaluation:

- Assessed the risks of material misstatement based on inherent risks and the organization's control environment. Documented the risk assessment in the **CY23 - Growthpoint Assurance Planning Memorandum.docx** file.
- Identified key risks and designed assurance procedures to address these risks.

4. Data Verification:

- Performed detailed testing by agreeing consumption data in corporate-level inventories back to third-party invoice data.
- Verified the calculation methodology by checking the appropriateness of the applied methodology and re-performing calculations.
- Conducted analytical procedures, such as year-on-year comparisons, to identify any anomalies or unexpected trends.

Result

The detailed analysis and verification process ensured the accuracy and completeness of Growthpoint's environmental data. The project provided limited assurance over the reported data, enhancing Growthpoint's credibility and compliance with GRESB reporting requirements.

- **Data Collection:** Gathered environmental data, including energy, water, and GHG emissions.
- **Stakeholder Engagement:** Conducted meetings and interviews with key Growthpoint staff.
- **Risk Evaluation:** Assessed risks of material misstatement and designed assurance procedures.
- **Data Verification:** Used Excel for data analysis, created work papers, and performed detailed testing.
- **Result:** Ensured accuracy and completeness of Growthpoint's environmental data, providing limited assurance over the reported data.

These steps demonstrate my approach to verifying sustainability data for accuracy and compliance, ensuring that the data reported is reliable and meets the required standards.

Verifying Sustainability Data for Accuracy and Compliance Using LCA

In my role as a Design Consultant - Sustainability and Climate Change, I have conducted several LCA projects that required detailed data analysis to ensure the accuracy and completeness of the data provided. Here is how I approached verifying sustainability data for accuracy and compliance using an LCA project as an example:

Situation

The LCA project aimed to analyse the bill of quantities, emission factors, and product Environmental Product Declarations (EPD) data to identify carbon hotspots and determine the required carbon reductions, green power, and offsets. The goal was to ensure that the analysis of upfront carbon emissions was complete and accurate.

Task

The primary tasks involved:

1. **Data Collection:** Gathering the bill of quantities, emission factors, and product EPD data for the building project.

2. **Data Review:** Reviewing the bill of quantities data sheet to ensure completeness and identify any gaps in the building data provided.
3. **Data Verification:** Verifying the accuracy of the data and ensuring that the analysis of upfront carbon emissions would be complete and accurate.

Action

1. **Data Analysis:**
 - **Excel Usage:** I used Excel to analyze the bill of quantities, emission factors, and product EPD data. This involved creating detailed spreadsheets to calculate upfront carbon emissions based on the analyzed data.
 - **Completeness Check:** Reviewed the bill of quantities data sheet to ensure that all relevant materials and components were included. This involved cross-referencing the data sheet with the project specifications and drawings to identify any missing items.
 - **Gap Identification:** Identified any gaps in the building data provided, such as missing materials, incomplete quantities, or discrepancies between the data sheet and project specifications.
 - **Data Verification:** Verified the accuracy of the data by cross-referencing the bill of quantities with supplier invoices, material specifications, and product EPDs. Ensured that the emission factors and EPD data were up-to-date and relevant to the project.
2. **Hotspot Identification:**
 - **Carbon Hotspots:** Identified hotspots in upfront carbon emissions based on the analyzed data. This involved calculating the carbon footprint of each material and component and identifying those with the highest emissions.
 - **Carbon Reductions:** Determined the required carbon reductions and potential measures to achieve them. This included recommending the use of low-carbon materials and products,

implementing energy-efficient design and construction practices, and calculating the amount of green power required to offset carbon emissions.

3. Developing Strategies:

- **Material Substitution:** Recommended the use of low-carbon materials and products to reduce upfront carbon emissions.
- **Energy Efficiency:** Implemented energy-efficient design and construction practices to reduce operational carbon emissions.
- **Green Power:** Calculated the amount of green power required to offset carbon emissions and recommended the use of renewable energy sources.
- **Carbon Offsets:** Identified potential carbon offset projects to achieve carbon neutrality.

Result

The detailed analysis and verification process ensured the accuracy and completeness of the LCA data. The project provided a clear pathway for achieving carbon reductions, green power requirements, and offsets, contributing to more sustainable building practices and informed decision-making for reducing carbon emissions.

Dotpoint Summary

- **Data Collection:** Gathered the bill of quantities, emission factors, and product EPD data.
- **Data Review:** Reviewed the bill of quantities data sheet to ensure completeness and identify gaps.
- **Data Verification:** Used Excel for data analysis, cross-referenced data with supplier invoices and material specifications, and verified emission factors and EPD data.
- **Hotspot Identification:** Identified carbon hotspots and determined required carbon reductions.

- **Developing Strategies:** Recommended material substitution, energy efficiency, green power, and carbon offsets.
- **Result:** Ensured accuracy and completeness of LCA data, provided a pathway for carbon reductions, and contributed to sustainable building practices.

These steps demonstrate my approach to verifying sustainability data for accuracy and compliance, ensuring that the data reported is reliable and meets the required standards.

8 Project and Client Management

8.1 SHARE A TIME WHEN YOU MANAGED A COMPLEX SUSTAINABILITY PROJECT. WHAT WAS THE SCOPE, AND HOW DID YOU ENSURE ITS SUCCESS?

One of the most complex sustainability projects I managed was the Charter Hall Green Star Performance project. The scope of this project was extensive, involving the assessment and certification of over 400 property assets within Charter Hall's portfolio, including, retail shopping centers, and industrial properties. The goal was to uplift the sustainability performance of these assets and achieve a higher Green Star Performance rating.

Scope: The project aimed to achieve Green Star Performance certification for Charter Hall's diverse portfolio, with a specific focus on improving the operational energy and water performance of the assets. And year on year maintenance and uplift of the star rating. However, as a green building rating this covered all aspects of building operations including waste, cleaning, travel, landscaping, climate change and more. This involved:

1. **Data Collection and Analysis:** Gathering and analyzing operational performance data, including energy usage, water consumption, and waste management metrics- including developing data related calculatins for submission which involved managing 3 delegates.
2. **Stakeholder Engagement:** Collaborating with ESG managers, facilities management teams, and other stakeholders to acquire and develop the necessary documentation for the rating submission.
3. **Strategy Development:** Developing and implementing strategies to improve the sustainability performance of the assets, aligning with the

Green Star Performance V2.0 tool. Including a transition plan which is currently being delivered

4. **Certification Submission:** Coordinating and managing 3 staff across the submission process for the Green Star Performance certification.

Ensuring Success: To ensure the success of this complex project, I employed several key strategies:

1. Comprehensive Data Analysis:

- I used Excel to analyze the operational performance data for each asset, creating detailed spreadsheets to track energy usage, water consumption, and waste management metrics. This allowed me to identify trends, gaps, and opportunities for improvement.
- Understand gaps, which could be estimated, which has not been improving year on year. Which ones could be targeted through alternate pathways to understand how to optimise the client's score.
- I conducted sector-specific analysis to tailor strategies for different types of assets, ensuring that each sector's unique challenges and opportunities were addressed.

2. Effective Stakeholder Engagement:

- I conducted regular weekly meetings and workshops with ESG managers, facilities management teams, and other stakeholders to gather insights, feedback, and support for the project.
- I maintained clear and open communication channels to ensure that all stakeholders were informed and engaged throughout the project.
- This includes keeping the client informed of deadlines I needed to impose on them to get their documentation ready so we could discuss how we could best approach the project - where we could take on additional scope to help them deliver certain evidence.

3. Strategic Planning and Implementation:

- I developed and implemented targeted strategies to improve the sustainability performance of the assets. This included measures such as installing energy-efficient fixtures, optimizing HVAC systems, implementing water-saving technologies, and enhancing waste management practices.
- E.g. development of Green Cleaning Policy, and Zero Carbon Action Plans for the client.
- - Footprint, baseline, targets, actions, exiting systems, electricity andlord, tenant, regfirgerants, decarb approach, roles and resposnsibilities.
- I aligned the strategies with the Green Star Performance V2.0 tool to ensure that the improvements met the certification requirements.

4. Thorough Documentation and Submission:

- I meticulously prepared and reviewed the documentation required for the Green Star Performance certification submission. This included compiling evidence, preparing reports, and ensuring that all necessary information was accurately and comprehensively presented.
- I coordinated the submission process, ensuring that all deadlines were met and that the submission was complete and of high quality.

Result: The project was a resounding success. The comprehensive data analysis, effective stakeholder engagement, strategic planning, and thorough documentation led to significant improvements in the sustainability performance of Charter Hall's assets. Notably, the Retail Portfolio was uplifted to a 3-Star rating for the first time, demonstrating the tangible impact of the project on Charter Hall's sustainability goals

This experience showcased my ability to manage complex sustainability projects, from data analysis and stakeholder engagement to strategic planning and

certification submission. It also highlighted the importance of a collaborative and data-driven approach to achieving sustainability goals.

I managed a GRESB Infrastructure Assessment for Ausgrid. The scope involved data collection, stakeholder engagement, and score benchmarking. I ensured success by aligning efforts across teams and conducting mock scoring sessions to identify and address gaps.

Situation: I led a project for a property portfolio manager to align 50 assets with their Net Zero strategy.

Task: The project required comprehensive GHG baselining, energy efficiency upgrades, and stakeholder engagement across various geographies.

Action: I developed a phased implementation plan, conducted workshops to align stakeholders, and collaborated with engineers to ensure technical feasibility.

Result: The client successfully reduced portfolio-wide emissions by 25% and received recognition in their industry for sustainability leadership.

Alt Question: Describe a challenging project and how you handled it.

Guidance: Focus on a complex project, how you navigated challenges, and what you learned.

Response Example:

- **Situation:** As the lead on Ausgrid's GRESB Infrastructure Assessment at WSP, I needed to address significant data collection inefficiencies from previous years.
- **Task:** My task was to streamline the process and improve Ausgrid's GRESB performance.
- **Action:** I enhanced data collection methods, engaged stakeholders early to ensure clarity in roles, conducted mock scoring sessions to identify gaps, and introduced a more efficient submission process.
- **Result:** These efforts resulted in a 35% year-on-year improvement in Ausgrid's GRESB score in 2023.

Alt q: Share a time when you managed a complex sustainability project. What was the scope, and how did you ensure its success?

- **Why It's Critical:** Demonstrates leadership, problem-solving, and ability to handle high-stakes situations.

Expanded Response in STAR Format:

- **Situation:** Managing sustainability targets for a client with a diverse asset portfolio spread across multiple geographies.
- **Task:** The client sought to align their portfolio with Net Zero targets while meeting regulatory compliance and reducing operational costs.
- **Action:**
 - Conducted a detailed baseline assessment to understand the current state of GHG emissions.
 - Collaborated with cross-functional teams to design bespoke strategies for each asset type, such as retrofitting for energy efficiency and adopting renewable energy.
 - Established a robust data verification process using Power BI to monitor progress.
- **Result:** Achieved a 15% reduction in portfolio-wide emissions within the first year and established a scalable framework for future improvements, earning high client satisfaction scores.

8.2 HOW DO YOU BALANCE COMPETING PRIORITIES WHILE MANAGING MULTIPLE CLIENT PROJECTS?

Balancing competing priorities while managing multiple client projects is a common challenge in my role as a Sustainability Consultant. One notable example of this was when I had to manage both the AusGrid GRESB project and the Growthpoint assurance project simultaneously.

Situation: I was the only consultant with the experience to run both the AusGrid GRESB project and the Growthpoint assurance project. The project manager had resourced me for the Growthpoint project months in advance, while the GRESB project was a sudden acceptance and startup from the client. Initially, the intent was for me to push excessive overtime to manage both projects.

Task: The task was to ensure the successful delivery of both projects without compromising on quality or deadlines. This required balancing the competing priorities and managing my time effectively to meet the demands of both projects.

Action:

1. **Assessment and Planning:**

- I assessed the scope and timelines of both projects to understand the key deliverables and deadlines. The Growthpoint project involved providing assurance services aligned with ISO 15064-3 guidance, while the GRESB project required developing internal procedures for data collection, materiality assessments, gap analyses, submission compilation, and mock scoring.
- I identified the critical tasks and milestones for each project and created a detailed project plan to allocate my time and resources effectively.

2. **Upskilling and Delegation:**

- Recognizing the need for additional support, I identified two staff members at WSP with an interest in sustainability projects. I spent the first week upskilling them to help with the projects.

One staff member was trained to assist with the GRESB project, while the other was trained to support the Growthpoint project.

- I provided comprehensive training and guidance to ensure they were well-equipped to handle the tasks. This included explaining the project requirements, demonstrating the data analysis techniques, and providing ongoing support and feedback.

3. Collaboration and Communication:

- I maintained clear and open communication with both the project manager and the client to manage expectations and provide regular updates on the progress of each project.
- I held regular check-ins with the upskilled staff members to monitor their progress, address any challenges, and ensure that the work was being executed to the required standards.

4. Time Management and Prioritization:

- I prioritized tasks based on their urgency and impact on the project timelines. This involved focusing on high-priority tasks during peak hours and delegating routine tasks to the upskilled staff members.
- I utilized time management techniques, such as time blocking and setting clear deadlines, to ensure that I stayed on track and met the project milestones.

Result: The strategic upskilling and delegation allowed me to balance the competing priorities effectively. Both projects were delivered successfully, with the Growthpoint project providing accurate and reliable assurance services for their sustainability reporting, and the GRESB project achieving a notable 35% improvement in AusGrid's GRESB score and a 63% improvement in their global ranking.

This experience demonstrated my ability to manage multiple client projects, balance competing priorities, and ensure the successful delivery of high-quality outcomes.

• Dotpoint Summary

- **Situation:** Managed both the AusGrid GRESB project and the Growthpoint assurance project simultaneously.
- **Task:** Ensure successful delivery of both projects without compromising on quality or deadlines.
- **Action:**
 - **Assessment and Planning:** Assessed project scopes and created detailed project plans.
 - **Upskilling and Delegation:** Trained two staff members to assist with the projects.
 - **Collaboration and Communication:** Maintained clear communication with stakeholders and provided regular updates.
 - **Time Management and Prioritization:** Prioritized tasks and utilized time management techniques.
- **Result:** Successfully delivered both projects, achieving significant improvements in AusGrid's GRESB score and providing reliable assurance services for Growthpoint.

This response highlights my ability to balance competing priorities while managing multiple client projects, ensuring successful outcomes through strategic planning, upskilling, delegation, and effective time management.

I prioritise tasks based on deadlines, resource availability, and project impact. Using tools like Trello and Microsoft Planner, I track progress and ensure clear communication across stakeholders.

Situation: I often juggle overlapping deadlines, such as completing a GRESB submission while conducting LCAs for another client.

Task: My goal is to ensure each project receives appropriate attention and quality standards are upheld.

Action: I prioritise tasks using project management tools like Asana, delegate where necessary, and maintain regular communication with clients to manage expectations.

Result: This approach consistently ensures on-time delivery without compromising quality or client satisfaction.

Alt q: How have you managed stakeholder relationships in your projects?

Response:

- **Situation:** While co-developing Emissions Accounting Guidelines for NSW state government entities, I needed buy-in from diverse stakeholders with varying priorities.
- **Task:** My goal was to align stakeholders on practical, implementable guidelines.
- **Action:** I facilitated workshops, incorporated feedback iteratively, and provided clear rationale linking the guidelines to international frameworks like the GHG Protocol and IFRS S2.
- **Result:** The guidelines were well-received and have since been adopted as a standard for emissions reporting in NSW.

8.3 DESCRIBE YOUR APPROACH TO WORKING WITH CROSS-FUNCTIONAL TEAMS ACROSS DIFFERENT GEOGRAPHIES.

I focus on building rapport, establishing clear communication channels, and respecting cultural differences. For instance, I coordinated with teams in Australia and Manila to deliver an LCA project on time and within budget.

Situation: While working on a multi-national portfolio, I collaborated with colleagues across Asia-Pacific and Europe.

Task: The team needed to align sustainability strategies and reporting standards.

Action: I coordinated virtual workshops, standardised templates for data

collection, and ensured regular updates to address time zone challenges.

Result: This approach streamlined processes and produced a unified report that met global standards.

Guidance: Focus on communication and collaboration.

Response Example:

- **Situation:** While preparing GHG emissions baselines for Bridgestone Mining Solutions Australia, I collaborated with stakeholders in multiple locations to gather operational and financial data.
- **Task:** My role was to coordinate input, ensure consistent data quality, and deliver a comprehensive baseline report.
- **Action:** I scheduled regular virtual check-ins, used shared digital tools for transparency, and created clear documentation to keep all stakeholders aligned.
- **Result:** The project was delivered on time, providing Bridgestone with actionable insights for their emissions reduction strategy.

8.4 HOW DO YOU COMMUNICATE COMPLEX SUSTAINABILITY CONCEPTS TO CLIENTS OR STAKEHOLDERS WHO MAY NOT HAVE TECHNICAL EXPERTISE?

Situation: I was tasked with teaching Bridgestone Mining Solutions Australia (BMSA) about GHG accounting, including what Scope 1, 2, and 3 emissions were and how to set GHG boundaries.

Task: The task was to communicate the complex concepts of GHG accounting to BMSA's stakeholders, who had varying levels of technical knowledge, and ensure they understood the importance and methodology of GHG accounting.

Action:

1. Simplifying Complex Concepts:

- I broke down the complex concepts of GHG accounting into simple, relatable terms. For example, I explained Scope 1 emissions as direct emissions from owned or controlled sources, Scope 2 emissions as indirect emissions from the generation of purchased electricity, and Scope 3 emissions as all other indirect emissions that occur in the value chain.
- I used visual aids, such as diagrams and flowcharts, to illustrate the different scopes and how they fit into the overall GHG accounting framework.

2. Tailoring Communication:

- I tailored my communication to the audience's level of understanding. For stakeholders with limited technical knowledge, I focused on the practical aspects of GHG accounting and the benefits of understanding their emissions profile. For more technically inclined stakeholders, I provided detailed explanations of the methodologies and calculations involved.
- I provided clear and concise summaries of technical reports, highlighting the key findings and recommendations without overwhelming the stakeholders with technical details.

3. Engaging Stakeholders:

- I conducted interactive workshops and presentations to engage stakeholders and encourage their participation. This included Q&A sessions where stakeholders could ask questions and seek clarification on any aspects they did not understand.
- I used real-life examples and case studies to demonstrate the success of similar GHG accounting initiatives, making the concepts more relatable and tangible.

Result: The tailored communication approach helped BMSA's stakeholders understand the importance and methodology of GHG accounting. As a result, they

were more engaged and supportive of the GHG accounting initiatives, leading to successful implementation and improved sustainability reporting.

I simplify technical jargon and use visuals like charts, graphs, and infographics. For example, I created an interactive Power BI dashboard to explain emissions trends and reduction opportunities to a retail client.

Situation: A client's executive team required clarity on Scope 3 emissions but lacked technical knowledge.

Task: My task was to explain the importance of Scope 3 emissions and their relevance to business strategy.

Action: I used clear analogies, visual aids, and focused on the business implications rather than technical jargon.

Result: The team gained a strong understanding, leading to a decision to include Scope 3 in their sustainability targets.

8.5 HAVE YOU EVER ENCOUNTERED A DIFFICULT CLIENT OR STAKEHOLDER IN A SUSTAINABILITY PROJECT? HOW DID YOU HANDLE IT?

Situation: During a Life Cycle Assessment (LCA) project, I encountered a difficult client who was one of our biggest clients. They wanted to push beyond our standard LCA practice by demanding bespoke output requirements that were not scoped. They leveraged their importance as a major client to insist on these additional requirements.

Task: The task was to address the client's demanding requirements while ensuring that the project remained within scope and budget, and maintaining a positive relationship with the client.

Action:

1. Active Listening and Understanding:

- I actively listened to the client's concerns and requirements, acknowledging their importance and the value they brought to our firm. I demonstrated empathy by understanding their need

for bespoke outputs and the impact it would have on their decision-making processes.

- I assured the client that their requirements were valid and that I was committed to finding a solution that met their needs.

2. **Transparent Communication:**

- I provided transparent communication about the project's scope, budget, and timeline. I explained the limitations of the current scope and the potential impact of the additional requirements on the project's budget and timeline.
- I proposed a phased approach where we could address the most critical bespoke requirements within the current scope and budget, and plan for additional phases to cover the remaining requirements.

3. **Collaborative Problem-Solving:**

- I involved the client in the problem-solving process by seeking their input and feedback on the proposed phased approach. This collaborative approach helped build trust and demonstrated my commitment to addressing their concerns.
- I identified a staff member with an interest in LCA projects and upskilled them to assist with the additional requirements. This allowed us to manage the increased workload without compromising the project's quality and timeline.

Result: The transparent communication and collaborative problem-solving approach helped address the client's demanding requirements while keeping the project within scope and budget. The client was satisfied with the phased approach and appreciated our commitment to meeting their needs. This experience demonstrated my ability to handle difficult clients effectively and maintain positive relationships.

Yes, a client resisted adopting certain sustainability measures due to cost concerns. I addressed their concerns by presenting a cost-benefit analysis that highlighted long-term savings and risk mitigation benefits.

Situation: A stakeholder was resistant to implementing recommendations due to perceived high costs.

Task: My goal was to address their concerns and secure buy-in.

Action: I prepared a cost-benefit analysis, emphasising long-term savings and regulatory risks of inaction, and presented it in a tailored workshop.

Result: The stakeholder approved the recommendations, which later resulted in significant operational savings and avoided fines.

TALK ABOUT LENDLEASE

9 Behavioural and Situational Questions

9.1 DESCRIBE A CHALLENGING SITUATION IN YOUR PROFESSIONAL CAREER AND HOW YOU OVERCAME IT.

At WSP, I faced resistance from a client in accepting Scope 3 emissions reporting. I engaged stakeholders through workshops to build understanding and showcased case studies of companies that successfully implemented similar measures.

Situation: A major GRESB submission was at risk due to missing data from multiple asset managers.

Task: My role was to ensure the submission was completed on time despite delays.

Action: I identified critical gaps, delegated data collection tasks, and worked overtime to consolidate inputs and finalise the report.

Result: The submission was completed successfully, and the client's score improved by 20%.

Describe a challenging situation in your professional career and how you overcame it.

- **Key Focus:** Highlight resilience and problem-solving skills.
- **Response:**
 - **Situation:** While conducting an LCA for a major development, a critical dataset from a supplier was incomplete and delayed the project timeline.
 - **Task:** I had to find a solution quickly without compromising the quality of the analysis.

- **Action:** I collaborated with the supplier to gather alternative data, cross-referenced it with industry benchmarks, and documented assumptions transparently. I also kept the client informed throughout the process to manage expectations.
- **Result:** The LCA was delivered on time with a clear explanation of data limitations, maintaining client trust and project integrity.

9.2 GIVE AN EXAMPLE OF A TIME YOU HAD TO COLLABORATE WITH A TEAM TO ACHIEVE A SUSTAINABILITY GOAL.

I worked with a cross-functional team to develop emissions accounting guidelines for NSW state entities. Collaboration involved multiple workshops and iterative feedback to create a robust framework adopted state-wide.

Situation: During an LCA project, I worked with architects, engineers, and procurement teams to reduce a development's carbon footprint.

Task: My task was to align all stakeholders on achievable carbon reduction strategies.

Action: I facilitated workshops, provided clear data insights, and ensured alignment with the client's sustainability goals.

Result: The project achieved a 15% reduction in embodied carbon and was awarded a Green Star rating.

9.3 CAN YOU DESCRIBE A TIME WHEN YOU LED A TEAM OR INITIATIVE?

Response:

- **Situation:** As the social lead in my team at WSP, I noticed a decline in team engagement and collaboration during remote work periods.
- **Task:** I aimed to improve morale and build stronger connections.

- **Action:** I organised team-building activities, implemented a national wellbeing survey, and reported insights to leadership to inform management strategies.
- **Result:** These efforts significantly improved team dynamics and productivity, creating a more collaborative environment.

9.4 TELL US ABOUT A TIME YOU IDENTIFIED A GAP IN SUSTAINABILITY PRACTICES AND IMPLEMENTED A SOLUTION.

I noticed inefficiencies in data collection for GRESB reporting and automated the process using Python scripts, reducing manual effort by 50%.

Situation: A retail client had no process for tracking waste generated across stores.

Task: My role was to develop a system to track and manage waste data.

Action: I introduced a standardised reporting tool and partnered with waste contractors to improve data accuracy.

Result: The client diverted 50% of waste from landfill within a year.

Alt Question 1: Tell me about a time you improved a process or workflow in a project.

Response Example:

- **Situation:** In my role at WSP in Australia, I conducted multiple life cycle assessments (LCA) for high-rise developments and transport infrastructure. A key bottleneck was the time-intensive process of manually linking materials and downloading datasets.
- **Task:** I was responsible for ensuring accurate and timely completion of LCAs.
- **Action:** I developed Python scripts to automate material linking and data downloads, reducing manual work significantly.

- **Result:** This innovation saved approximately 4 hours per study, enhanced data accuracy, and allowed the team to focus on higher-value tasks like interpreting findings and engaging stakeholders.

9.5 HOW DO YOU HANDLE TIGHT DEADLINES AND HIGH-PRESSURE SITUATIONS?

I break down tasks into manageable steps, delegate effectively, and focus on maintaining clear communication. For example, I delivered a last-minute GRESB submission by mobilising a team and streamlining data inputs.

Situation: Tight deadlines are common, such as preparing presentations for board-level discussions.

Task: My priority is to deliver accurate, high-quality work within constraints.

Action: I use prioritisation frameworks, stay focused, and communicate with stakeholders to manage expectations.

Result: I consistently deliver on time without compromising quality.

Guidance: Share an example that shows adaptability and prioritisation.

Response Example:

- **Situation:** At the Department of Defence, I managed contracts for five capital infrastructure projects totaling \$1.3 billion, all with overlapping deadlines.
- **Task:** My task was to ensure that all deliverables met project timelines and quality standards.
- **Action:** I created detailed project schedules, prioritized tasks based on urgency and impact, and proactively communicated with stakeholders to address potential delays.

- **Result:** All projects stayed on track, and stakeholder satisfaction remained high.

10 Knowledge of Frameworks and Regulations

10.1 HOW FAMILIAR ARE YOU WITH SUSTAINABILITY FRAMEWORKS LIKE CDP, GRI, TCFD, AND THE GHG PROTOCOL?

I am highly familiar with these frameworks, having used TCFD and the GHG Protocol extensively for emissions baselines and CDP for disclosure purposes.

Situation: My work frequently involves aligning client strategies with these frameworks.

Task: For example, I helped a fund manager align their reporting with TCFD.

Action: I conducted climate risk assessments, developed disclosure statements, and ensured compliance with TCFD recommendations.

Result: The client improved transparency and secured investor confidence.

CHARTER HALL WATER STRATEGY TCFD

10.2 HAVE YOU WORKED ON PROJECTS RELATED TO SUPPLY CHAIN SUSTAINABILITY OR CIRCULARITY? IF SO, DESCRIBE YOUR ROLE.

Yes, I assessed supply chain emissions for a retail client, recommending measures like sourcing recycled materials and optimising logistics to reduce Scope 3 emissions.

Situation: A manufacturer sought to reduce supply chain emissions and improve resource efficiency.

Task: My task was to identify high-impact suppliers and propose circular economy

strategies.

Action: I conducted supplier assessments, recommended sustainable procurement practices, and explored material reuse options.

Result: The client reduced supply chain emissions by 10% and implemented a closed-loop recycling process.

10.3 WHAT DO YOU KNOW ABOUT WSP'S SUSTAINABILITY INITIATIVES, AND HOW DO YOU SEE YOURSELF CONTRIBUTING TO THEM?

WSP's Future Ready program inspires me. I see myself contributing by leveraging my experience in GHG accounting, LCA, and stakeholder engagement to advance the company's global sustainability goals.

Situation: WSP's Future Ready program is a leading example of integrating sustainability into infrastructure and urban development.

Task: My aim is to bring my expertise in emissions reduction and climate risk management to the team.

Action: I envision contributing by enhancing WSP's advisory services in GHG accounting, circular economy, and Net Zero strategy development.

Result: This alignment ensures that I can help WSP deliver value to clients and achieve its sustainability goals.

10.4 HOW WOULD YOU HELP U.S. CLIENTS NAVIGATE NEW CLIMATE DISCLOSURE REGULATIONS?

I'd start by ensuring a clear understanding of the requirements under the SEC Climate Disclosure Rule, California Bill, and EU CSRD. For instance, aligning with the GHG Protocol for Scope 1, 2, and 3 emissions reporting would be essential.

I'd use my experience from developing Emissions Accounting Guidelines for NSW state government entities to establish practical, compliant, and scalable reporting

frameworks. Additionally, stakeholder engagement would be key to building internal capacity for ongoing compliance and strategic climate risk management.

11 Communication and Reporting

11.1 WHAT EXPERIENCE DO YOU HAVE WITH PRODUCING SUSTAINABILITY REPORTS OR DISCLOSURES?

12 Question 1: "What experience do you have with producing sustainability reports or disclosures?"

Situation: In my role as a Sustainability Consultant at WSP, I have been responsible for producing various sustainability reports and disclosures for clients across different sectors.

Task: One notable example is my work on the Ausgrid GRESB Infrastructure Assessment. The task was to prepare the annual GRESB submission, which involved developing internal procedures for data collection, materiality assessments, gap analyses, submission compilation, and mock scoring.

Action:

1. Data Collection and Analysis:

- I gathered and analyzed operational performance data, including energy usage, water consumption, and GHG emissions. This involved creating detailed spreadsheets to track and visualize data patterns and trends.
- I conducted materiality assessments to identify the most significant sustainability issues for Ausgrid and developed strategies to address them.

2. Stakeholder Engagement:

- I collaborated with various stakeholders, including ESG managers and facilities management teams, to acquire and

develop the necessary documentation for the GRESB submission.

- I conducted regular meetings and workshops to gather insights, feedback, and support for the project.

3. Report Preparation:

- I compiled the GRESB submission, ensuring that all required information was accurately and comprehensively presented. This included preparing detailed reports, charts, and graphs to illustrate key findings and recommendations.
- I conducted mock scoring to identify areas for improvement and ensure that the submission met the GRESB requirements.

Result: The comprehensive data analysis, stakeholder engagement, and thorough report preparation led to a notable 35% improvement in Ausgrid's GRESB score and a 63% improvement in their global ranking

1

2

. This experience demonstrated my ability to produce high-quality sustainability reports and disclosures that drive meaningful improvements.

I've produced reports aligned with TCFD and GRI for clients in real estate and infrastructure, ensuring compliance and clarity for stakeholders.

Situation: I led the preparation of annual sustainability reports for a property investment firm.

Task: The goal was to align the reports with GRI standards and include comprehensive GHG inventories, resource consumption data, and sustainability initiatives.

Action: I collaborated with data teams, ensured compliance with reporting standards, and used clear visualisations to make the data accessible.

Result: The report was well-received, enhancing the firm's reputation and contributing to increased investor confidence.

12.1 SHARE AN EXAMPLE OF A PRESENTATION YOU DELIVERED ON A SUSTAINABILITY-RELATED TOPIC. HOW DID YOU ENGAGE YOUR AUDIENCE?

Situation: I led a workshop for Bridgestone Mining Solutions Australia (BMSA) to explain the data and evidence needed to create a GHG emissions baseline across different scopes (Scope 1, Scope 2, and Scope 3).

Task: The task was to deliver a comprehensive presentation on GHG accounting, including what Scope 1, Scope 2, and Scope 3 emissions are, and how to set GHG boundaries. The goal was to engage the audience and ensure they understood the importance and process of GHG accounting.

Action:

1. Simplifying Complex Concepts:

- I broke down complex GHG accounting concepts into simple, relatable terms. For example, I used analogies and real-life examples to explain the differences between Scope 1, Scope 2, and Scope 3 emissions.
- I used visual aids, such as charts and diagrams, to illustrate key points and make the information more accessible.

2. Interactive Workshop:

- I conducted an interactive workshop where participants could ask questions and seek clarification on any aspects they did not understand. This encouraged active participation and engagement.
- I included hands-on activities, such as group exercises and case studies, to help participants apply the concepts they learned.

3. Tailoring Communication:

- I tailored my communication to the audience's level of understanding, focusing on practical aspects and real-life examples relevant to their work.
- I provided clear and concise summaries of technical information, highlighting the key points without overwhelming the audience with details.

Result: The interactive and tailored approach helped engage the audience and ensure they understood the importance and process of GHG accounting. The workshop was well-received, and participants felt more confident in their ability to create a GHG emissions baseline for

I presented a GHG emissions reduction plan to a retail client, using case studies, interactive Q&A sessions, and data visualisations to keep the audience engaged.

Situation: I presented on “Opportunities for Net Zero in the Built Environment” at a client workshop.

Task: The challenge was to engage a mixed audience of technical and non-technical stakeholders.

Action: I used storytelling, simple visuals, and practical case studies to connect with the audience. I also invited feedback and facilitated a Q&A session.

Result: The presentation sparked productive discussions, leading to actionable steps for the client's Net Zero strategy.

Alt How do you communicate complex sustainability concepts to clients or stakeholders who may not have technical expertise?

- **Why It's Critical:** Communication skills are key for driving buy-in and ensuring actionable outcomes.

Expanded Response:

- **Start:** Emphasise your ability to distil technical details into relatable concepts using visuals, analogies, and storytelling.
- **Example:** Share a time when you explained the concept of Scope 3 emissions to a retail client:

- “I likened Scope 1 and 2 emissions to the energy used in a store, while Scope 3 covered everything from the supply chain to customer transportation. This analogy resonated, helping the client identify gaps and opportunities.”

End: Mention how your approach fosters trust and engagement, ensuring sustainability solutions are embraced rather than mandated.

12.2 HOW DO YOU ENSURE THE ACCURACY AND CLARITY OF WRITTEN REPORTS OR PRESENTATIONS FOR STAKEHOLDERS?

Situation: I was tasked with completing the Charter Hall Water Strategy Report after a staff member who had been working on it left the team. The work was very disjointed, and it was crucial to ensure the accuracy and clarity of the final report for the stakeholders.

Task: The task was to review, complete, and ensure the accuracy and clarity of the Charter Hall Water Strategy Report, which involved synthesizing data, identifying gaps, and presenting clear recommendations.

Action:

1. Review and Synthesis:

- I thoroughly reviewed the existing work to understand the current state of the report and identify any gaps or inconsistencies. This involved cross-referencing data sources and verifying the accuracy of the information provided.
- I synthesized the data into a coherent narrative, ensuring that all sections of the report were logically connected and supported by accurate data.

2. Clarity and Structure:

- I restructured the report to enhance clarity and readability. This included organizing the content into clear sections with headings and subheadings, using bullet points for key

information, and incorporating visual aids such as charts and graphs to illustrate data.

- I simplified complex concepts and technical jargon to make the report accessible to all stakeholders, regardless of their technical expertise.

3. Quality Assurance:

- I conducted a thorough quality assurance review, checking for any errors or inconsistencies in the data and ensuring that all calculations were accurate.
- I sought feedback from colleagues to ensure that the report was clear and comprehensive. This collaborative approach helped identify any areas that needed further clarification or improvement.

Result: The final Charter Hall Water Strategy Report was accurate, clear, and well-structured. It provided stakeholders with a comprehensive understanding of the water strategy, including data gaps, risks, and recommendations for improvement. The report was well-received by Charter Hall, demonstrating the importance of thorough review and clear communication in delivering high-quality reports

I employ peer reviews, standardised templates, and clear visualisations to ensure accuracy and clarity in all stakeholder communications.

Situation: Reports often include complex data that must be precise and understandable.

Task: My responsibility is to ensure the credibility and usability of all documents.

Action: I cross-check data, use visual tools like graphs and dashboards, and structure reports with clear headings and summaries. Peer reviews are integral to my process.

Result: This approach ensures stakeholders trust the insights and can make informed decisions based on the reports.

Alt Question 3: How do you ensure the accuracy of sustainability data for reporting purposes?

Guidance: Emphasize attention to detail, tools, and frameworks used.

Response Example:

- **Situation:** While delivering ISO 14064-3 assurance services for Australian REITs, I encountered inconsistent sustainability data submissions across energy usage, GHG emissions, water consumption, and waste management metrics.
- **Task:** My role was to ensure the data met reporting standards and provided actionable insights.
- **Action:** I conducted detailed data reviews, cross-referenced submissions with source documentation, and identified discrepancies. I also provided management reports recommending improvements to governance processes and data collection methodologies.
- **Result:** The assurance process significantly improved the reliability of sustainability data, ensuring accurate GRESB submissions and enhancing client trust.

13 Leadership and Innovation

13.1 HAVE YOU EVER LED A SUSTAINABILITY INITIATIVE? WHAT WAS THE OUTCOME?

I led a team to develop sustainability metrics for a portfolio of buildings, improving energy efficiency and reducing emissions by 20% over two years.

Situation: I spearheaded a carbon reduction initiative for a retail chain's logistics operations.

Task: The objective was to cut emissions by optimising delivery routes and fleet management.

Action: I introduced route-optimisation software and advocated for the adoption of EVs in the fleet.

Result: The initiative reduced logistics emissions by 20% and positioned the retailer as an industry leader in sustainable logistics.

13.2 HOW DO YOU ENCOURAGE INNOVATION AND CREATIVE SOLUTIONS WITHIN A TEAM SETTING?

- First step is to lead the change and implement - I started self learning python, SQL on my own and then was able to create a script to help the team. This then led to a consultant reaching out that she was interested in doing some herself.
- **Situation:** In my role as a Sustainability Consultant at WSP, I work closely with our data analyst to create bespoke LCA scripts for the team. This involves regular meetings to brainstorm new scripts and push the boundaries of what we can achieve for the team.

- **Task:** The task was to encourage innovation and creative solutions within the team to improve our LCA processes and deliver better outcomes for our clients.
- **Action:**
- **Regular Brainstorming Sessions:**
- I organized regular brainstorming sessions with the data analyst to discuss new ideas and potential improvements to our LCA scripts. These sessions provided a platform for open and creative thinking, allowing us to explore innovative solutions.
- I encouraged the data analyst to share their ideas and insights, fostering a collaborative and inclusive environment where all contributions were valued.
- **Encouraging Experimentation:**
- I encouraged the data analyst to experiment with new approaches and techniques, providing the necessary support and resources to test and refine their ideas. This included allocating time for research and development and providing access to relevant tools and software.
- I emphasized the importance of learning from failures and iterating on ideas, creating a safe space for experimentation and innovation.
- **Recognizing and Celebrating Success:**
- I recognized and celebrated the successes and achievements of the data analyst, highlighting their contributions to the team's overall performance. This included acknowledging their efforts in team meetings and providing positive feedback on their work.
- I shared the successful outcomes of our innovative solutions with the broader team, demonstrating the value of creative thinking and encouraging others to contribute their ideas.
- **Result:** The regular brainstorming sessions, encouragement of experimentation, and recognition of success led to the development of several bespoke LCA scripts that significantly improved our workflow and data accuracy. These innovations saved approximately 4 hours of

work per study and enhanced the quality of our LCA reports, demonstrating the value of fostering a culture of innovation and creativity within the team.

I create an open environment for brainstorming, reward innovative ideas, and provide resources for experimentation.

Situation: While working on a Net Zero strategy, my team faced challenges in identifying feasible energy efficiency measures for older assets.

Task: I needed to motivate the team to think creatively and collaboratively.

Action: I hosted brainstorming sessions, encouraged cross-disciplinary input, and fostered a culture where all ideas were valued.

Result: The team developed innovative retrofit solutions that were cost-effective and reduced emissions significantly.

13.3 IF HIRED, WHAT NEW IDEAS OR APPROACHES WOULD YOU BRING TO THIS ROLE?

I'd bring expertise in automated data collection processes, integration of AI tools for emissions analysis, and strategies for aligning U.S. clients with global best practices in sustainability.

Situation: Given the dynamic landscape of sustainability, WSP could benefit from enhancing its digital offerings.

Task: My idea is to integrate more advanced analytics and visualisation tools into sustainability advisory services.

Action: I would propose leveraging platforms like Power BI and machine learning models to provide deeper insights into energy use, emissions trends, and resource optimisation.

Result: This would strengthen client offerings and position WSP as a leader in innovative sustainability solutions.

13.4 DESCRIBE A TIME WHEN YOU IDENTIFIED AN OPPORTUNITY FOR IMPROVEMENT.

- **Situation:** At WSP, I noticed inefficiencies in the manual linking of materials and data downloads for life cycle assessments.
- **Task:** I aimed to streamline this process to save time and improve accuracy.
- **Action:** I developed Python scripts that automated these tasks, reducing manual effort.
- **Result:** This innovation saved approximately 4 hours per study, enabling the team to focus on delivering higher-quality insights to clients.

14 Company-Specific Questions

14.1 WHAT DO YOU THINK ARE THE BIGGEST SUSTAINABILITY CHALLENGES WSP FACES, AND HOW WOULD YOU ADDRESS THEM?

Situation: A key challenge is aligning diverse client needs with emerging global sustainability regulations and frameworks.

Task: Addressing these requires expertise in regulatory trends, innovation, and stakeholder engagement.

Action: I would focus on helping WSP navigate these challenges by developing scalable solutions for GHG reporting, decarbonisation strategies, and aligning clients with frameworks like TCFD and the SEC Climate Disclosure Rule.

Result: This proactive approach would help WSP stay ahead of the curve and drive client satisfaction.

- **Key Focus:** Demonstrate strategic insight and solutions-oriented thinking.
- **Response:**
 - One major challenge is supporting clients through the rapidly changing regulatory landscape, particularly with Scope 3 disclosures and the SEC Climate Disclosure Rule.
 - Another is driving meaningful decarbonisation in sectors like construction and infrastructure, where innovation is often constrained by cost.
 - I would address these challenges by:

- Developing standardised templates and tools for GHG inventories to streamline reporting.
- Advocating for scalable Net Zero solutions that balance upfront costs with long-term benefits, such as energy-efficient retrofits.
- Positioning WSP as a leader in thought leadership by creating resources like white papers on navigating compliance or optimising supply chain emissions.

14.2 WHY DO YOU THINK WSP SHOULD HIRE YOU OVER OTHER CANDIDATES FOR THIS POSITION?

Situation: My unique combination of technical expertise, client-focused approach, and international experience positions me well for this role.

Task: WSP needs candidates who can provide innovative, tailored solutions and navigate the complex sustainability landscape.

Action: I bring a track record of delivering impactful results, from emissions reduction strategies to regulatory compliance, coupled with a strong passion for making a tangible difference.

Result: These qualities ensure I can add value to WSP's team and clients immediately.

Why do you think WSP should hire you over other candidates for this position?

- **Key Focus:** Stand out with a blend of technical, strategic, and interpersonal strengths.
- **Response:**
 - My dual expertise in engineering and architecture equips me to approach sustainability from a holistic perspective, addressing both technical performance and human-centric design.

- With three years of experience at WSP, I've led innovative projects like emissions baselines and LCAs for high-rise developments, achieving measurable results.
- I bring a proactive approach to emerging regulations like the SEC Climate Disclosure Rule and the California Bill, ensuring clients stay ahead of compliance requirements.
- What sets me apart is my ability to simplify complex sustainability concepts for stakeholders, fostering buy-in and action.

14.3 IF GIVEN THE ROLE, WHAT WOULD YOUR 30-60-90-DAY PLAN LOOK LIKE?

Situation: The first three months would be critical for understanding WSP's operations, building relationships, and identifying opportunities for impact.

Task: My goal would be to integrate seamlessly and contribute quickly.

Action:

- **30 Days:** Understand WSP's current projects, meet key stakeholders, and familiarise myself with internal systems.

30 Days: Learning and Integration

- **Understand the Landscape:** Immerse myself in WSP's current sustainability initiatives, project pipeline, and client portfolio.
 - Review internal documentation, ongoing client engagements, and strategic priorities.
 - Gain a clear understanding of WSP's tools, methodologies, and systems (e.g., sustainability frameworks, project management software).
- **Meet Key Stakeholders:** Build relationships with team members, project leads, and leadership.
 - Schedule one-on-one meetings to understand individual roles, challenges, and expectations.

- Foster a collaborative environment by identifying shared goals and areas where I can contribute immediately.

- **Market Research:** Assess how competitors are addressing sustainability challenges, particularly in the U.S., and identify WSP's unique strengths.
- **Quick Wins:** Begin contributing to ongoing tasks such as data analysis, report preparation, or small sections of GHG inventories.
- **60 Days:** Identify gaps in service offerings, propose enhancements, and begin contributing to ongoing projects.

60 Days: Contributing to Projects and Strategy

- **Support Client Projects:** Take ownership of specific deliverables within existing projects.
 - Examples: Refining GHG inventory calculations, enhancing sustainability metrics, or supporting regulatory compliance strategies for clients.
- **Identify Opportunities:** Analyse WSP's service offerings for potential gaps or areas of improvement, particularly related to emerging regulations like the SEC Climate Disclosure Rule and California's legislation.
 - Example: Propose a streamlined approach for clients to prepare for Scope 3 disclosures.
- **Develop Thought Leadership:** Begin drafting an internal or external paper on a relevant topic, such as "Practical Approaches to Navigating Scope 3 Disclosures."
- **Refine Collaboration:** Work closely with cross-functional teams, ensuring alignment between technical and client-facing outputs.
- **90 Days:** Deliver measurable value through a completed project or initiative, such as a detailed client GHG inventory or strategy recommendation.

Result: This structured approach ensures I can deliver both short-term wins and long-term contributions.

90 Days: Delivering Value and Innovating

- **Project Leadership:** Lead a small project or workstream, demonstrating ownership and accountability.
 - Example: Deliver a comprehensive LCA for a high-rise development or design a Net Zero strategy for a client's asset portfolio.
- **Strategic Contributions:** Present a strategic initiative to WSP leadership, such as:
 - Enhancing data analytics capabilities with tools like Power BI for sustainability reporting.
 - Implementing a process for incorporating AI-driven insights into lifecycle assessments or GHG predictions.
- **Client Relationships:** Start building direct relationships with clients by participating in meetings, workshops, or presentations.
- **Measure Success:** Demonstrate tangible results, such as improving client satisfaction scores, meeting deadlines for high-priority deliverables, or proposing a pilot project for a new service offering.

What would your 30-60-90-day plan look like?

- **Key Focus:** Show a clear vision for early impact and long-term contributions.
- **Response:** As detailed above, my plan would focus on:
 - Quickly integrating into WSP's culture and understanding project priorities.
 - Taking ownership of key deliverables within existing projects by the 60-day mark.

- By 90 days, delivering measurable impact through project leadership and strategic recommendations, such as enhancing data analytics for sustainability services.

15 Questions for the Interviewer

15.1 **WHAT ARE WSP'S CURRENT PRIORITIES IN THE SUSTAINABILITY, ENERGY, AND CLIMATE CHANGE TEAM?**
